PROFILE

I am a creative thinker and I love innovative technology, data, codes and their application to the design, analysis and development of great and modern technology.

I am highly innovative and can work with minimum supervision channeling all my skills towards achieving organizational objective. My unique qualities are that I am friendly, helpful, resourceful, very organized, I always pay attention to detail and I am always ready to learn.

HOBBIES

- Movies
- Comics
- Music
- Basketball
- Drawing
- Writing

WORK

2017 - 2018 **Evans Publishers**, Ibadan, Oyo state, Nigeria.
Full stack developer

My National youth service corps (NYSC) duration was spent here as a Full stack developer. I designed the modern and aesthetic user interface for the **Evans integrated school management system** application with HTML/CSS and javascript. I also worked with a team where we split the development of different modules for the back-end of the software with PHP as it's scripting language and MySQL as its database management system.

2019 - 2021 **Freelance.**
Full stack developer

I became a freelance developer and this experience expanded my skills in the use of modern concepts and designs and also broadened my programming and database management skills. It also sharpened my skills in communication with clients, better organization and attention to detail. Some of the projects are:

◆ The development of a web application for and organization called Odua association based in Milwaukee, USA. The application consists of a general section, a members section and an admin section for complete creative control of the content on each section.

URL: <https://oduamke.org/>

◆ The development of a car sales web platform called favour autosales based in the USA, for my client to display cars being put up for sale and their respective details.

URL: <https://favorautosales.net/>

◆ The development of a website for a non-profit organization called Angelic assistance

URL: <https://angelicassistance.org>

2021 - 2021 **Prudent Digital International**, London. UK
Front-end developer

Worked with a team of developers to design and develop a real-estate web application in which Reactjs was used for the front-end design and Laravel was used for the back-end. My responsibilities were optimizing the user interface and experience with the UI/UX mock up provided for the application, Implementing site responsiveness for different screen views, Improving site interaction and making sure the API interactions(sending and displaying) were well structured and fixing bugs after thorough testing.

EDUCATION

Babcock university
BSc Computer science
Second class upper division
2013-2017

London South Bank University
MSc Data science
Yet to be completed
2021-2022

SKILLS

PROGRAMMING

- HTML/(S)CSS
- JavaScript
- Reactjs
- Nodejs
- TypeScript
- Python
- PHP
- SAS

DATABASE MANAGEMENT

- MYSQL
- PostGre SQL
- MongoDB

GRAPHIC DESIGN

- Adobe Photoshop
- Adobe Illustrator
- Adobe after-effects
